

An advanced platform for structured training and objective assessment in medical practice

From core to specialist and emergency procedures, including military medicine.

Driven by rising training costs, post-COVID simulation adoption, and the need for objective skills assessment.

The Problem

Teamwork and coordination not measurable

Low realism and overly linear scenarios

Critical decisions not objectively measured

No Communication and empathy assessable

Hands-on training is costly and not scalable

The Solution

How It work

3 Different Solutions

AR

VR

VR – HIGH

PERSONAL AREA WITH
STATISTICS AND ANALYSIS

EsculapioVR is a training & assessment platform designed for institutional certification and skills validation

Business Model

Licenses are sold institutionally (per department or cohort), with optional hardware leasing.

EsculapioVR – Training Packages & Procedure Roadmap	Procedures Planned 2026	Procedures Planned 2027	Annual license*
Nursing training package for core procedures and patient care	15	7	349\$
General medical training package for standard clinical procedures	10	5	449\$
Orthopedic training package for trauma and musculoskeletal procedures	5	5	599\$
Vascular training package for access, bleeding control, interventions	5	5	649\$
Emergency department training package for critical scenarios and teamwork	10	8	499\$
Civil first aid training package for basic life support emergencies	8	7	149\$
Military emergency medical training package for tactical battlefield care	6	10	1,199\$

*Licenses are software-only and do not include hardware leasing or device supply. EsculapioVR offers optional leasing of pre-configured AR/VR devices, including mini-PCs optimized for maximum software performance. Hardware leasing costs are not included in the annual license price. Annual licenses include standard AI usage quotas. Excessive AI usage requires additional AI token credits, ensuring fair use and preventing multi-user license sharing.

Revenue Growth Drivers & Expansion Model

EsculapioVR Revenue grows through licenses, advanced procedures, AI usage, assessments, and hardware leasing.

Projections reflect a conservative global adoption model across **Europe, Middle East, and North America.**

The model accounts for repeat license purchases within the same institution (e.g. multi-year medical training programs, increasing student cohorts, and specialization upgrades).

Esculapio vs Competitors

Capability / Feature				
AI-driven medical procedures	✓	⊘	⊘	⊘
Natural AI dialogue with patients & operators	✓	⊘	⊘	⊘
Dynamic scenarios with real-time complications	✓	⊘	Limited	Limited
Multi-device support (AR, VR, High-Perf VR)	✓	VR only	VR only	VR only
Team-based multi-operator training	✓	Limited	✓	Limited
AI-powered performance assessment	✓	⊘	⊘	⊘
Soft-skill evaluation (communication, empathy)	✓	⊘	⊘	⊘
Medical certification & operator evaluation	✓	Limited	Limited	Limited

Companies with static, non-AI simulations already reached \$60M+ valuations.

ASK

Funding Objective

EsculapioVR is **targeting a €4M total raise** to complete the full medical procedure roadmap within the planned development timeline.

The company is currently advancing from a **€100k phase** and is opening a **€500k round**, with a **€1M follow-on** round planned as the next growth milestone.

Investment Allocation

Product, AI & R&D Development

Core platform, AI models, simulation engine, evaluation systems

Hardware Leasing & Infrastructure

AR/VR devices, mini-PCs, deployment-ready kits

Operations & Compliance

Regulatory, certifications, security, corporate operations

Medical Procedures & Specialists

Development of standard and advanced medical procedures

Go-to-Market & Strategic Partnerships

Sales, institutional partnerships, international expansion

Companies with static, non-AI simulations already reached \$60M+ valuations.

Our Team

Leadership

Mr. Nassim Davide Sidaoui
CEO & Founder

With over 20 years of IT experience, he leads Yuniro's strategic vision and innovation roadmap and serves as CEO of IQ-Tech, a Qatar-based startup incubated at QSTP, developing EsculapioVR as a next-generation medical training and simulation platform.

Mr. Giuseppe Teodorico
COO & Co-Founder

Administrator at Logilux Srl, a leading HR and Events company. Oversees strategic business operations and partnerships.

Mrs. Christina Atat
PM & Co-Founder

Project Manager at IQ-Tech, working on VR and AI solutions that enhance medical and emergency response training through innovation, global collaboration, and real-world impact.

Mr. Gianluca Bisignano
CSO & Co-Founder

Administrator of Selexi Srl, experts in managing public and private selection processes. Brings strategic insights and industry connections.

Mr. Sandro Musarò
CTO & Co-Founder

CTO at Selexi Srl. Expert in server architecture, physical infrastructure, and system optimization. Provides technical leadership at Selexi Srl and supports Yuniro with scalable solutions.

Mrs. Justin Lauro
Business Developer

Born as pure saleswoman, she found out to be good in strategy. She's been in business development sectors for over 15 years, often doubling companies' turnovers. She speaks five languages and has a creative and strategic mindset that helps shaping innovative solutions.
